

CLUTCHTECH

TSB-FWB01

****WARNING****

The application where this clutch kit is applied uses Torque to Yield bolts mounting the flywheel to the crankshaft. These bolts are designed to deform to a yield point upon installation and therefore should not be re-used. Every time these bolts are removed, after being torqued to manufacturer specification, they should be replaced as a precaution. These bolts are commonly used in conjunction with a Dual Mass Flywheel with a multi-layer crank flange to obtain optimal clamping conditions between flywheel and crank.

!! TORQUE TO YIELD BOLTS CAN NOT BE RE-USED !!
